

System Developer with Business Knowledge - Open Position with Established SaaS Project

About CUBS

CUBS A/S delivers a billing solution (CUBS) aimed at the energy & utility sectors. It is delivered as a Software as a Service. Our ambition is to innovate the way utility- and energy companies bill their customers and we want to set a new standard for usability, flexibility, automation and integration for software in this sector. Our software is currently marketed in Denmark only, but designed for international expansion.

We are informal - both internally and towards customers. We value good technical skills and we strive to create code of a very high quality. Our office is located in Greve (Denmark) - approx. 30 min. from Copenhagen center. Your frequent presence in the office is valued, but not required.

About the Job

You will join our CUBS team as a system/backend developer where you will make use of your skills in system development and keen interest in understanding the businesses we support with our system.

During the years ahead we want to make CUBS even more automatic and data driven, and you will be a part of the team making it possible.

Required Qualifications:

- A lot of experience with software development, unit testing, peer reviewing of code
- PHP/Laravel/Symphony or similar frameworks
- Experience with SQL databases (MySQL/MariaDB/CockroachDB)
- Good Danish and/or English skills - both writing/reading and speaking.

Bonus qualifications:

- Good with data/numbers + financial understanding
- Experience with reporting and a wish to learn more ETL/BI
- Google Cloud experience

We use an automated CI/CD process to test and deploy our code.

Your personal skills

To succeed as our new developer, you should understand both business and technology. Our customers expect us to understand their business, so you must possess business understanding on a high level and take a genuine interest in learning about the businesses where CUBS is used.

You will work with our own business and product management as well as customers and our tech leads. You must have good communication skills and be able to talk business with customers and management - and talk technology with the other developers.

We offer

You will be a part of an innovative project with high ambitions to disrupt the market for energy and utility sector billing solutions, where non-utility products like insurance, broadband fiber etc. play an increasing role.

We offer a fixed monthly salary at market level, health insurance, and a nice place to work.

Your new colleagues are highly skilled and a bit nerdy in a good way.

Application

If you have any questions regarding the position please call Torben Sørensen at +45 7077 7060.

Please send your application and your CV in PDF format to hr@cubs.dk.

We will do interviews starting now, so we recommend that you apply as soon as possible.
